

# Free Public Panel: Vaccination in Disease Prevention

Vaccination is one of the greatest achievements in the history of medicine. It is effective against many viral infections in humans and animals, and against non-viral disease. Increasingly, people in the western world are hesitant about vaccination, and thereby put children and adults at risk to develop disease, such as Measles. Scientists from Switzerland, Germany and France are inviting the public to discuss questions regarding vaccination, both in German or English.

## PLENARY SPEAKERS

### Martin Bachmann

(Oxford University, UK & University of Bern, CH)
